Delivering province-wide education and training

- **University Academic Campuses**
  Instructional sites that offer a complete pre-clerkship academic year.

- **Clinical Academic Campuses**
  Large health care facilities that provide a wide range of care or can be highly specialized. Each facility is operated by one of the province’s six health authorities, who are critical partners in UBC’s effort to increase the number of health professionals in British Columbia.

- **Affiliated Regional Centres**
  Medium-sized regional hospitals that can accommodate modest numbers of students, including 3rd and 4th year medical students, medical elective programs, family practice programs and some focused specialty programs for postgraduate residents. Faculty of Medicine academic administrative offices and student/resident facilities are provided here. Each facility is operated by one of the province’s six health authorities.

- **Community Education Facilities**
  Community-based education facilities which are located in urban and rural locations that include formal UBC affiliated primary care hospitals. Generally smaller than Affiliated Regional Centres. Community Education Facilities can accommodate students and residents for specific parts of their training to special elective programs to provide experience in primary care delivery, chronic disease management and inter-professional care. These sites serve medical students and residents, student audiologists, speech language pathologists, ophthalmic therapists, physical therapists and/or midwives in the community.

- **Province-wide Health Authorities**
  Provincial Health Services Authority
  First Nations Health Authority
